Next review due: 18<sup>th</sup> July 2021, or when government guidelines change

This policy covers the extra measures to ensure our maintenance days comply with the UK government's CoViD-19 guidelines and that volunteers can work safely during that time. This is in addition to the standard maintenance day risk assessment. This assessment should be reviewed at the start of every month during the CoViD-19 regulations and when government guidelines change.

### Compliance with UK government guidelines

UK Government guidelines (<https://www.gov.uk/guidance/national-lockdown-stay-at-home>) allow for provisions of voluntary or charitable services if these can be done safely.

RHSO maintenance activities can continue under these rules. Relevant government guidelines and other considerations are:

- All activities take place outdoors.
- Social distancing according to UK government guidelines (currently 2m) to be implemented unless volunteers are from the same household.
- Persons with CoViD-19 symptoms (including fever, cough, loss of sense of smell) should not attend.

### Control measures to mitigate against SARS-CoV2 transmission

- Working groups to be limited to two persons, unless from same household.
- Working groups to consist of members of the same household where possible.
- If working groups involve people from different households, social distancing guidelines (currently 2 m) should be followed.
- If a task cannot be performed safely under these measures, it should be delayed. If the task is urgent (e.g., there is a safety risk to the general public), a separate risk assessment should be conducted.
- Alcohol hand gel to be provided by RHSO.
- Volunteers advised to bring own gardening gloves / secateurs.
- If gloves issued by RHSO, these are to be separated and not re-used for now week.
- Tools should not be shared between volunteers from different households without cleaning between uses.
